STEP 1: DOWNLOAD THE REQUIRED FILES

Download the files from the 3 links on the website.

STEP 2: INSTALL THE ORIGINAL CLIENT

Run and install the AC1INSTALL.EXE. This is the final installer that Turbine had for Asheron's Call. It is still needed to run the emulator.

STEP 3: REPLACE FILES

Open the AC-UPDATES.ZIP. In the directory where you installed the original client, use the files in the zip file and update the files in the client. These updates are needed so the client will work with the emulator.

STEP 4: INSTALL THE THWARG-LAUNCHER

Install the THWARGLAUNCHERINSTALLER.EXE.

STEP 5: CONFIGURE THE THWARG-LAUNCHER

WARNING: Do not run the original AC Launcher. Turbine turned off their hosting back in 2017. The launcher will fail to work. The Thwarg-Launcher was designed to be the replacement launcher.

- 1. Launch the Thwarg-Launcher.
- 2. You need to tell the launcher where the original ACCLIENT.EXE is located. Click the ellipses (...) and select the location of the ACCLIENT.EXE you installed in Step 1.

3. Click the ADVANCED VIEW button.

4. You will get this warning. Click YES and continue.

5. Click EDIT SERVERS

6. Click ADD SERVER

7.
